BB' Section 1/100

These stations are where bioplastics are made and tested. Workers and researchers use simple tools and equipments to cook, shape, and dry the materials. The labs are small but include everything needed for daily production—tables, sinks, storage, and drying shelves. Also, they are located under the amphitheatre.

View E

Workshop Labs are flexible spaces for weekly workshops focused on bioplastics. Each week, a new topic is explored—such as molding, coloring, or decay processes. Participants can join and experiment with different recipes, tools, and techniques.
