

The structure itself becomes an active body—the *archive*

The public can walk through, sit in the amphitheater, or join workshops. They can watch how the archive is created, decays, and remade. **The archive becomes a living record**—not only of materials, but of human presence, weather, time, and care. This is not an archive of objects, but of actions, relationships, and slow transformations.

Newly made bioplastic.
Very clear and flexible.
With a slight shine.
(0-1 week)

30–50% opacity

Starting to age.
Becomes less transparent.
Texture hardens slightly.
(1–3 weeks)

50-70% opacity

Mid-age stage.
Surface is more matte
and stiff.
Small cracks may form.
(3–6 weeks)

70.00% 1.00%

Old bioplastic.
Nearly opaque, color darkens.
Material feels dry and fragile.
(6+ weeks)
