Manifesto

I am a curious designer based in Istanbul who focuses on sustainability and the design process itself in spatial and atmospheric design. I explore the potentials of materials, produce my own materials, and integrate them into the design process.

In my work, I value the relationship between existing spaces and design interventions, incorporating the memory of a space, the nature of materials, and traces of human presence into the design.

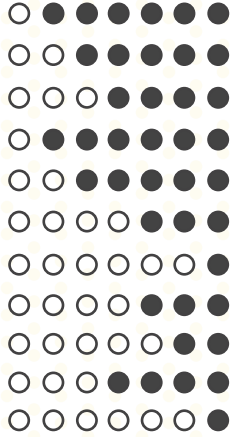

I am particularly interested in biomaterials not only as sustainable alternatives, but as materials that can carry and communicate stories. Through experimenting with and producing materials myself, I explore their qualities, transformations, and imperfections, and how these can become part of the story and atmosphere of a space.
